

Rationale for CXCR3+/- gate: raw count > 0 (applied before normalization, per data_io.add_cxcr3_group)

CXCR3 detection across all B cells (n=172,324)
CXCR3-: 145,145 (84.2%) | CXCR3+: 27,179 (15.8%)

Spread among CXCR3+ cells (n=27,179)
(checking for a natural second breakpoint beyond presence/absence)
