

Rationale for CXCR3+/- gate: raw count > 0 (applied before normalization, per data_io.add_cxcr3_group)

CXCR3 detection across all B cells (n=173,663)
CXCR3-: 146,019 (84.1%) | CXCR3+: 27,644 (15.9%)

Spread among CXCR3+ cells (n=27,644)
(checking for a natural second breakpoint beyond presence/absence)
